

CONTAMINANT CONTROL IN BULK DIESEL FUEL DISTRIBUTION

Diesel fuel may leave refineries free of contaminants, but fuel condition changes depending on the route of transportation and the number of transfer points in between. FAUDI Diesel Filtration Solutions help to better manage and control fuel quality from refinery to dispensing.

REFINERY	<p>Fuel Cleanliness from Refining</p> <ul style="list-style-type: none"> - Delivery of high-quality fuel - Removal of refining process contamination - Minimize system damage by eliminating water born contaminants - Sensors to detect free water levels and water in filter drains and sumps 	
TERMINAL	<p>Fuel Cleanliness at Storage</p> <ul style="list-style-type: none"> - Efficient single-pass particulate & water removal - Monitoring & control of water contaminant - Detection of free water in fuel storage - Detection of water in filter drains and sumps 	
TRANSPORT	<p>Fuel Cleanliness in Transport</p> <ul style="list-style-type: none"> - Bulk fuel filtration at loading, transfer points in between and at delivery - Monitoring & control of water contamination - Ensure fuel meets customers' equipment specifications 	
MINING	<p>Surface Mining</p> <ul style="list-style-type: none"> - High-flow rate bulk particulate & water removal at receipt and delivery - Efficient single-pass particulate & water removal - Filtration products designed for long onstream life - Monitoring & control of water contaminant throughout the system - Ensure fuel specification compliance at delivery 	
POWER GENERATION	<p>Primary Critical Power</p> <ul style="list-style-type: none"> - Efficient single-pass particulate & water removal - Monitoring & control of water contaminant - Detection of gross water in fuel storage - Ensure fuel specifications compliance 	
SHIPPING/MARINE	<p>Bulk Fuel Filtration in Shipping/Marine</p> <ul style="list-style-type: none"> - Bulk particulate & water removal at fuel storage - Monitoring & control of particulate & water contaminant - Detection of water in storage tank drain and filtration sump 	
RAIL	<p>Rail Fuel Depot</p> <ul style="list-style-type: none"> - Bulk particulate & water remove at fuel storage - Efficient long life single-pass particulate & water removal - Monitoring & control of water contaminant - Detection of water in storage tank drain and filtration sump
